## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, 13-17, 26, and 27, drawn to transmitting a character and its action to a receiving side where the character performs the designated action on a screen, classified in class 715, subclass 758.
  - II. Claims 9-11, 18-21, and 22-25, drawn to displaying information on the status of users, classified in class 715, subclass 736.
  - III. Claim 12, drawn to comparing information transmitted from a transmitting side with information provided by the receiving side to decide victory or defeat, classified in class 463, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as transmitting a character and its action to a receiving side where the character performs the designated action on a screen. Invention II has separate utility such as displaying information on the status of users.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does

not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, group I as claimed does not require the particulars of group III as claimed because other methods for comparing information transmitted from a transmitting side with information provided by the receiving side to decide victory or defeat can be implemented.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, group II as claimed does not require the particulars of group III as claimed because other methods for comparing information transmitted from a transmitting side with information provided by the receiving side to decide victory or defeat can be implemented.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes is indicated as proper. See MPEP § 806.05(d).

3. A telephone call was made to Daniel Evans on April 18, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement, to be complete, must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

4. In accordance with 35 U.S.C. 133, a shortened statutory period of one month (not less than 30 days) is hereby set forth to reply to this Office action. See also MPEP 710.02(b).
